

# TOPOLOGY WEBSITE DESIGN

DESIGN AND POP SCREENS DRAFT

This scroll helps in navigating the tabs appearing on the screen to indicate the length of the tab

Depending on the importance and announcement needed a pop screen will appear once the page has loaded which can be closed by the user

The scarf will be a loop animation of a slight upward and downward movement

This tab bar will include everything necessary for Topology, more can be added along the way if necessary. Just like a window once the tab opened there will be an indication below showing which once are in use. Notification icon can be used as a number above the icon

The icons will have a looping animation according to their use

A simple message can be added below the Toplogy Logo that can be changed accordingly.
